**For optimal results allow cuttings to sit in MX Clone Gel for 30 seconds. To use MX Clone Gel as a solution add 5ml gel to 3 gallons of water in your aero cloner or to soak your rockwool cubes.**

April 2012

## GROWER NOTES

When growing in coco/soil/soiless mediums start nutrients at half dilution then increase in 1/4 increments as needed.

Always adjust your pH after adding nutrients to your water.

When using Grow and Bloom sprays, be sure to have a clean and stable environment. Spray as lights come on for best results. Below 80 and above 70 are optimal temps for foliar feeding.

When transplanting rooted cuttings, make sure your medium is evenly saturated, and has had time to get to room temp. This reduces shock, and helps promote healthy growth almost immediately after transplanting.

Use our Grow Spray at 5 ml per liter 3 days after you start your clones to get a jump start on your plants vegging process.
